March 2011

## Improvements

### New Install Process

The 2011 release is packaged with vintage 2011 data and version 8.8.2 software, which provides Microsoft Windows 7 support and a streamlined install process. For installation instructions please see the AnySite 8.8.2 Install Guide.

### Data Manager

Improved functionality includes:

- Place names are displayed for Forward Sortation Areas(FSA).
- Ability to export duplicate Census Subdivision(CS), Census Tract(CT) or Place Names from different provinces.

### High Speed Boundaries

This release of AnySite Canada includes the original high definition province boundaries as well as new high speed province boundaries. The new map preference file (Canada OEM StreetPro Rev2 Map Preferences.art) should be imported via Configurator to take advantage of this new feature.

## Known Issues

### MapMarker Data Not Found (Error 2306)

Click OK to remove the error message. Application performs correctly.

### ART Files not Removed by the Installer

Previous year's data and report files (.ART files) are not removed by the installer. Import new .ART files in configurator. Application performs correctly.

### Data Refresh Overwrites Previous Hot Fixes

Reinstall any hot fixes that you had installed prior to this data refresh. Contact Technical Support for assistance with hot fixes for AnySite.
